

Paper Seed Ornaments

Make Earth-Friendly, Biodegradable Seed Ornaments!

1. To get started make your paper design. Get creative! Draw a flower, butterfly, bird, or Ms. Smarty-Plants™ hat!
2. Place two pieces of paper together and cut out your design. This way you have two cut-outs to sandwich your seeds in between.
For flowers make a pollen circle out of 1 piece, and flower petals for the 2nd piece.
3. Take a glue stick and trace the edge of the paper with the glue, also put a glue in the center.
4. Place your desired seeds (*hopefully native!*) on the center of your paper. Just a little sprinkle will do.
5. Take the other traced paper, of the same shape, and place on top. This way the two papers are glued together.
6. Punch a hole in the top of your design and loop with string.
Make sure to punch the hole above the glue line.
7. Now you have a dangling seed ornament that is biodegradable and good for the earth!

Enjoy!
